JMK FLOW · DESIGN WITH INTENT

Joanna
Mućka

UI / UX DESIGNER
QA BACKGROUND

CONTACT

- T +48 661 756 916
- @ joanna.mucka@outlook.com
- in linkedin.com/in/joanna-mucka
- 🔗 jmkflow.pl
- G Gdańsk · remote / hybrid

PERSONAL STRENGTHS

- User-centered thinking**
I design solutions around user needs, usage context and product goals.
- Analytical and critical thinking**
I combine data, observations and business requirements to make informed design decisions.
- Design problem solving**
I turn complex problems and processes into simple, intuitive experiences.
- Attention to detail and consistency**
I care about information hierarchy, readability, interface states and the consistency of the end-to-end experience.
- Curiosity and assumption validation**
I look for the root cause, ask the right questions and verify whether proposed solutions are actually sound.
- Product and systems thinking**
I look beyond a single screen, considering the full flow, business context and technical constraints.
- Cross-functional collaboration**
I explain design decisions clearly and work effectively with business stakeholders, developers and QA.

TOOLS

Tools I use across different stages of design and technical work.

AREA	TOOLS
Design	Figma
	Adobe After Effects
	Webflow
	FigJam
Collaboration	Adobe Photoshop
	Stack
	Jira
	Confluence
Technology & QA	Git
	Playwright
	Postman
	DevTools
AI in my workflow	HTML/CSS
	REST API
	Swagger
	JSON
	SQL
	RabbitMQ
	Kibana
	CI/CD
	ChatGPT
	Codex
	Claude Code

JMK FLOW · DESIGNING EXPERIENCES THAT MATTER

Quality, users and business. *All in one flow.*

UI/UX Designer with several years of experience working on digital products in QA and a growing JMK FLOW design portfolio. I work from problem analysis and information architecture through user flows and responsive interfaces to prototyping, validation and implementation-ready design. I bring a strong visual eye and make design decisions grounded in user needs, business goals and technical feasibility.

5 case studies

branding, product UI, e-commerce, UX research

B2B SaaS

hands-on experience with complex business systems

Web + mobile

responsive flows, interactions and usability

API + data

system states and developer collaboration

01 UI/UX SKILLS

I design decisions, not decoration.

In practice, I focus on clear hierarchy, complete interface states and consistent components, making decisions based on user needs, business goals and technical feasibility.

01.

Problem analysis & insights

I make sense of problems through user-needs analysis, research, market benchmarking, conversations and prioritization.

02.

Information structure & user flows

I structure information, key user paths and interface states, including errors, loading, empty states, confirmations and ways to recover or go back.

03.

UI, interactions & components

I design responsive interfaces, components and micro-interactions with a strong focus on clarity, consistency and accessibility.

04.

Solution validation & implementation readiness

I combine prototyping, usability testing, review against UX principles and QA, collaborating with developers before implementation and checking the result after release.

02 PRODUCT EDGE

QA gives me a broader product perspective.

I spot risks, missing scenarios and technical constraints early, before they become implementation problems.

REAL-WORLD USER SCENARIOS

I design for situations where the process does not go as planned.

I treat errors, missing data, validation and loss of context as part of the user experience.

error states validation context continuity

TECHNICAL CONTEXT

I assess solutions with feasibility in mind.

APIs, data, logs and microservices help me understand system dependencies and constraints.

API microservices developer collaboration

SOLUTION QUALITY

I make sure the design is complete before implementation starts.

I consider acceptance criteria, state consistency and potential risk points during design.

acceptance criteria consistency risk

USER & BUSINESS

I connect user needs with product goals.

Experience with processes and stakeholders helps me account for both perspectives in design decisions.

user needs business goals stakeholders

03 SELECTED PROJECTS

Five projects, five different design problems.

Five self-initiated projects cover different areas of work: product and e-commerce, personalization, marketplace, UX research and visual identity.

KROSS

Product UI/UX · E-commerce

Bike selection, comparison, configuration, responsive UI and purchase flow for a premium product.

EDUCATION & INVOLVEMENT

UNIVERSITY OF GDANSK

Master's degree

Criminology
2015-2017

Master's degree

National Security
2015-2017

Bachelor's degree

Administration
2012-2015

UNIVERSITY INVOLVEMENT

Member of the Disciplinary Committee, Scholarship Committee and Faculty Council at the University of Gdańsk.

LANGUAGES

English · B1

German · B1

INTERESTS

- UX design
- technology
- padel
- travel
- tennis
- running
- board games

PAWS

Personalization · Mobile & web

Dog-care recommendation flow, e-commerce, a consistent UI system and an interactive prototype.

SKY

TRAVEL

UX research · UX direction

Desk research, interviews, persona, user journey mapping, competitor analysis and a clear UX direction before UI design.

O MAMO!

Marketplace · Booking flow

Two-sided parent ↔ caregiver experience: search, profile, booking, payment and confirmation.

MB

BEAUTY

Branding & visual identity

A cohesive brand system for a beauty salon covering visual identity, social media, print, packaging and the physical space.

The portfolio includes self-initiated and concept projects. I do not present them as commercial client work or attribute unverified outcomes to them.

04

EXPERIENCE

Experience combining UI/UX, product and quality.

Each stage of my career added a different layer: people and process work, risk analysis, data, technology and ownership of quality. Today I combine them into one deliberate design perspective.

09.2026 - PRESENT

JMK FLOW · portfolio & service offering

UI/UX Designer

INDEPENDENT DESIGN BRAND & PORTFOLIO · GROWING SERVICE OFFERING

- I develop JMK FLOW as my own design brand and portfolio, while building a service offering covering UI/UX, websites, branding and visual materials. I define the brand direction, the structure of the offer and how the services are presented.
- I develop each project as a case study that explains the problem, assumptions, key design decisions and the actual scope of work, so the portfolio shows not only the visual outcome but also my design thinking.
- I designed jmkflow.pl as a combined service and portfolio website, including the home page, services, pricing, portfolio, process, about and contact sections. I also develop responsive layouts and interactions that guide users through the site.
- I keep JMK FLOW visually consistent across typography, color, components, interaction patterns and microinteractions used throughout the website, case studies and brand materials.
- While developing my own website, I review the implementation for design fidelity, responsive behavior and basic accessibility checks. I use ChatGPT and Codex to support analysis, iteration and implementation, while final design decisions remain mine.

01.2025 - PRESENT

Trans.eu

QA Engineer

FREIGHT EXCHANGE PLATFORM · PRODUCT QUALITY AND USER PERSPECTIVE

- I support the development of the Trans.eu freight exchange by testing changes across frontend, backend, REST APIs and mobile-app integrations; I perform functional, integration, end-to-end (E2E) and user acceptance (UAT) testing and support release-readiness assessment.
- In Postman I validate REST APIs, including JSON structure, HTTP status codes, token-based authorization, edge cases and data consistency. I also analyze backend logs in Kibana and service-to-service communication in RabbitMQ.
- I create and maintain test cases and scenarios in Xray, report and analyze defects in Jira, and document findings and solutions in Confluence, with a focus on clear problem descriptions and product impact.
- I verify AI-enabled features, feature flags and environment-dependent configurations, giving me hands-on experience with different product states, system dependencies and feature behavior under varying conditions.
- I work with CI/CD pipelines in Jenkins, run automated tests and analyze results. Trans.eu recognized my potential in test automation and supported my development in this area; I build tests in Playwright and TypeScript, using Claude Code to support analysis, and my progress has led to greater independence and more technically demanding tasks related to product quality.
- I work in a SAgile environment with developers, Product Owners, analysts and business stakeholders. My QA background helps me understand how requirements, data and technical constraints translate into interface behavior and user experience.

12.2022 - 08.2024

Necto

Manual Tester

WEB AND MOBILE APPLICATIONS · USABILITY AND INTERFACE QUALITY

- I tested web and mobile applications across frontend, backend and REST APIs, including integrations with external systems, which gave me a view of end-to-end processes rather than isolated screens.
- As part of application testing, I evaluated usability and identified UX/UI and interaction issues, including problems with responsiveness and interface consistency that affected the user experience.
- I analyzed frontend issues in DevTools, including the console, cookies, sessions, DOM structure and interface behavior across different screen resolutions.
- I designed and executed test cases, scenarios and test plans; documented results in Jira and YouTrack; and reproduced, documented and reported defects in detail.
- I validated data and ran SQL queries in PostgreSQL and MS SQL Server, helping me verify information presented to users and diagnose the source of defects.
- I worked with GitLab in a Scrum environment and supported business and operational users, gaining direct insight into their real needs, problems and how they used the systems.

10.2019 - 11.2022

Trigonum · 4 roles

Four roles, one common thread: processes, people and information.

Within one organization I progressed across operations, executive office work, data protection, HR and project delivery. I now draw on that range in product work: I map processes, structure complex information and collaborate effectively with varied stakeholders.

Junior Project Implementation Specialist

10.2022 - 11.2022

EU project documentation, financial settlements and cost monitoring, data analysis and advanced Excel.

HR Specialist

11.2021 - 10.2022

End-to-end recruitment, onboarding, candidate communication and tools for analyzing working time and project efficiency.

Data Protection Representative

04.2021 - 10.2022

Compliance audits, data-protection impact assessments (DPIAs), process registers and incident handling; mapping data flows, risks and requirements.

Management Board Office Manager

10.2019 - 10.2022

Document digitization, ERP work, operational process optimization, cost reporting and contractor coordination.

08.2017 - 09.2019

BoomBit · Rubo-Serwis · District Court · Tru Trussardi

Earlier operational & customer-facing roles

- Working with ERP systems, documentation, data and customers made me more attentive to context, communication and real user behavior.

Developing UI/UX, product and technical skills.

I combine design, product and technical education to build a skill set that works in a real product team, not just in a design tool.

GOOGLE · 08.2025

Google UX Design

Research, problem definition, wireframing, prototyping and usability testing.

DESIGN PRACTICE PL · 01-04.2024

Interaction Designer

Interaction design, user flows, microinteractions and informed design decisions.

SKVOT POLAND · 10-11.2023

Figma

Components, Auto Layout, prototyping and design system organization.

AKADEMIAUXUI.PL · 09.2022-03.2023

Full Stack UX/UI Designer

UX/UI process from analysis and information architecture to final interface and portfolio.

OTHER COURSES

SCALED AGILE · 09.2025

SAFe 6 AI-Empowered Product Owner / Product Manager (POPM)

Product value, prioritization, stakeholder collaboration and product decision-making.

AKADEMIAQA · 08-09.2026

Playwright UI / API / Advanced / MCP + TypeScript

Test automation, API testing, interface quality and technical product validation.

I consent to the processing of my personal data included in this CV for recruitment purposes in accordance with Regulation (EU) 2016/679 of the European Parliament and of the Council of 27 April 2016 (GDPR).

Case studies reflect the actual scope of my work and do not include invented KPIs.

Joanna Mućka
